On Friday, May 3rd the Evansville Cancer Center/Vantage Oncology hosted its 11th annual free full body skin cancer screening in conjunction with the American Academy of Dermatology’s skin cancer awareness month activities and campaign. The screenings were conducted by board certified dermatologists Dr. Shari Barrett, Dr. Jane Lim, and Dr. Mary Tisserand who have volunteered their time and professional expertise for the past 11 years.

In the 11 years these physicians have conducted the skin cancer screenings, a total of 1,147 people were examined finding 918 suspicious lesions and 30 probable melanomas. They were referred back to their primary care physician or a dermatologist for further medical care. Each attendee was provided with educational materials in addition to complimentary sunscreen and lip balm.

2013 American Academy of Dermatology Skin Cancer Screening

- **77 People Screened with 28 Requiring Further Medical Care**

The American Academy of Dermatology created Melanoma Monday® in 1995 to focus national attention on the seriousness of skin cancer, including melanoma, and the importance of performing skin self-exams to detect skin cancer early. Every year since, the Academy has launched its skin cancer detection and prevention efforts on Melanoma Monday®. Because of the national recognition Melanoma Monday® has achieved, the Academy chose that day to launch SPOT Orange™ and their annual skin cancer awareness efforts, which continued throughout May as part of Melanoma/Skin Cancer Detection and Prevention Month®. In support of the Academy’s SPOT Orange™ campaign on Melanoma Monday, May 6th the staff at Evansville Cancer Center and Deaconess Chancellor Center wore their orange!
